Balanced Parenthesis in C++

```
#include <iostream>
#include <stack>
using namespace std;
bool isBal(string str) {
            stack<char> s;
            for (int i = 0; i < str.length(); i++) {
                         if (str[i] == '(' | | str[i] == '{' | | str[i] == '[') {
                                      s.push(str[i]);
                         } else {
                                      if (s.empty()) {
                                                   return false;
                                     else if ((str[i] == ')' && s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | | (str[i] == ')' & s.top() == '(') | (str[i] == ')' & s.top() = '(') | (str[i] == ')' & s.top() == '(') | (str[i] == ')' & s.top() = '(') | (str[i] == ')' & s.top() = '(') | (str[i] == ')' & s.top() = '(') | (str[i] == ') | (s
== '}' && s.top() == '{'} | | (str[i] == ']' && s.top() ==
'[')) {
                                                    s.pop();
                                     } else {
                                                    return false;
             }
            return s.empty();
int main() {
            cout << boolalpha << isBal("(())") << endl; //
Example usage
           return 0;
```

Function Purpose

Checks if the string contains balanced brackets:

• (), {}, and []

Q Input

string str = "(())"

Stack Simulation Table

i	str[i]	Stack Before	Action	Stack After
0	(Push '('	['(']
1	(['(']	Push '('	['(', '(']
2)	['(', '(']	Top '(' matches) → Pop	['(']
3)	['(']	Top '(' matches) → Pop	

∜ Final Check:

- Stack is $empty \rightarrow Balanced$
- Output: true

Qutput:

true

true
