#include <vector>
#include <unordered_map>
#include <deque>
using namespace std;

vector<int>& arr, int k) {
  vector<int> result;
  unordered map<int, int> frequencyMap;
  int n = arr.size();
  int i = 0;
  // Initialize the frequency map for the first window
  for (i = 0; i < k - 1; ++i) {
    frequencyMap[arr[i]]++;
  for (int j = -1; i < n; ++i, ++j) {
    // Add the next element (i-th element) to the
frequency map
    frequencyMap[arr[i]]++;
    // Record the number of distinct elements in the
current window
    result.push_back(frequencyMap.size());
    // Remove the (j-th element) as the window slides
    if (j \ge 0) {
       if (frequencyMap[arr[j]] == 1) {

  vector<int> result =
distinctElementsInWindow(arr, k);
  for (int num : result) {

```

Dry Run:

Initialize:

- arr = [2, 5, 5, 6, 3, 2, 3, 2, 4, 5, 2, 2, 2, 2, 3,6]
- k = 4
- frequencyMap = {} (Empty at the start)
- result = [] (Empty at the start)

Step-by-Step Iteration:

Final Result:		
The output is the list of distinct elements in each sliding window of size k as the window slides across the array:		

Output:

3 4 4 4 3 3 4 4 3 3 2 2 3

Output: 3 4 4 4 3 3 4 4 3 3 2 2 3
